■ Descriptions

The SGR2838A is miniaturized receivers for infrared remote control systems. PIN diode and preamplifier are assembled on lead frame, the epoxy package is designed as IR filter. The demodulated output signal can directly be decoded by a microprocessor. SGR2838A is the standard IR remote control receiver, supporting all major transmission codes.

■ Applications

- ◆ AV instruments such as Audio, TV, VCR, CD, MD, etc.
- ◆ Multi-media Equipment
- ◆ The other equipments with wireless remote control

■ Application Circuit:

RF Filter should be connected closely between Vcc pin and GND pin.

■ Test Method :

The specified electro-optical characteristics is satisfied under the following Conditions at the controllable distance.

◆ Measurement place:

A place that is nothing of extreme light reflected in the room.

◆ External light:

Project the light of ordinary white fluorescent lamps which are not high Frequency lamps and must be less then 10 Lux at the module surface. (E_e ≤ 10Lux)

◆ Standard transmitter:

Standard transmitter: A transmitter whose output is so adjusted as to V_o=400mVp-p and the output Wave form shown in Fig.-1. According to the measurement method shown in Fig.-2 the standard transmitter is specified.

However , the infrared photodiode to be used for the transmitter should be

λ_p=940nm, Δλ=50nm. (Standard light / Light source temperature 2856°K).

◆ Measuring system:

■ The Notice of Application:

Transmission of remote control signal consist of four parts: Encode Part, IR Transmitter Source, SGR device, Decode Part

1. Strong or weak light of IR Transmitter can affect distance of transmission.
2. When using the SGR2838A, it requires the composition of code pattern to reach the demand as follows:
